Good morning,

The Pre-RD group and Global Diving have just completed their health and safety meeting at the SIL boat ramp and are preparing to mobilize to location ST07 (RM 16.2). Two vessels will be used for today's sediment trap activities; NRC Next Generation and Gravity Marine's Cayuse. The Next Generation vessel will be utilized by divers to don and remove diving gear/viking suits and the cabin will serve as the divers communication station. Retrieval, deployment, and sediment trap processing will take place on board the Next Generation Vessel. The Cayuse will be tethered next to the Next Generation R/V and used as a warming station for the divers. Pictured are various H&S items on board the Vessels.

Jonni
